DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 25-28, 31, 59, 68-69, 74 and 80-81 are being rejected under 35 U.S.C. 102(e) as being anticipated by Kusner et al (U.S. Patent # 6,284,982).

As to claim 25, Kusner shows, referring to figure3, a substrate 20 carrying at least one terminal and at least one conductive trace. There is a polymeric film 12 separate from the substrate, positioned at least partially over the substrate and carrying at least one additional conductive trace 96. Refer to column 5 and figure 3.

As to claim 26, the substrate comprises at most four conductive layers.

As to claim 27, the polymeric film is at least partially adhered to the substrate.

As to claim 28, the one additional conductive trace at least partially establishes communication between the at least one terminal and another terminal carried upon the substrate.

As to claim 31, at least one additional conductive trace carried upon the polymeric film is configured to at least partially establish communication between at least one terminal and a corresponding bond pad of at least one semiconductor device.

As to claim 59 and 74, referring to figure 3, there is a substrate carrying a first plurality of conductive traces. There is a routing element 12 separate from the substrate and carrying a second plurality of conductive traces positioned at least partially on the substrate. There is a device secured to the substrate.

As to claim 68, the substrate comprises at most four conductive layers.

As to claim 69, the second plurality of conductive traces of the routing element provides a more direct electrical route than any conductive trace carried by the substrate.

As to claim 80, referring to figure 3, there is a substrate carrying a first plurality of conductive traces. There is a routing element 12 separate from the substrate and carrying a second plurality of conductive traces positioned at least partially on the substrate. There is a device secured to the substrate. The substrate is at most four conductive layers.

As to claim 81, the second plurality of conductive traces of the routing element provides a more direct electrical route than any conductive trace carried by the substrate.

Claim Objections

1. Claims 29-30, 32-37, 60-67, 70-73, 75-79 and 82-83 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
